

PMAApp Desktop Installation Guide

For Leaders - Windows - One account for phone & desktop

This guide helps you install **PMAApp** on your Windows computer as a standalone desktop app. On a wide screen it automatically shows the **Leadership Cockpit** overview; your login account is **exactly the same** as on your phone, and the **AI Assistant** is built in. Takes about 2 minutes - just follow the 4 steps below.

1

Open a browser

On your Windows PC, open **Google Chrome** or **Microsoft Edge** (usually on the taskbar or desktop - Chrome is the colored circle, Edge is the blue "e").

If you don't have one, install Chrome from [google.com/chrome/](https://www.google.com/chrome/), or Edge from the Microsoft Store (often pre-installed).

2

Open the site and sign in

In the browser **address bar**, type (or paste) the URL below and press Enter:

<https://ryanchen7051.github.io/pmapp-mobile/>

Sign in with the **exact same** account and password as your phone app. You will land on the PMAApp home page.

3

Install to desktop (standalone app)

Method 1 (easiest): Look at the **far right** of the address bar - an "Install" icon appears (sometimes a computer/plus icon). Click it, then choose "Install PMAApp".

Method 2: Click the "... " or "■" menu at the top-right -> find "Install PMAApp / Install this site as an app" -> click to install.

After installation, a **PMAApp icon** is added to your Windows **desktop** and also to the **Start menu**.

4

How to open it later

Simply **double-click the PMAApp icon** on your desktop (or find PMAApp in the Start menu).

It opens as a **standalone window with no address bar** - like a native app. You won't accidentally close a tab or lose your work.

What you'll see (wide-screen)

With the window widened, a **left navigation bar** appears and the home page shows the **Leadership Cockpit**:

- **6 core KPIs:** total projects / open issues / DOA records / RMA in progress / shipments in transit / unfinished tasks
- **Recent activity:** latest updates on issues, DOA, RMA, and inspections (newest first)
- **Project stage distribution:** counts per stage at a glance
- **DOA / RMA trend charts:** quality trends visualized

PMAApp Desktop Installation Guide

For Leaders - Windows - One account for phone & desktop

- **8 quick-access shortcuts**: one tap to jump in
- **AI Assistant** built into the top-right of the home page - click to chat

Narrow the window, or open on your phone, and it automatically returns to the **bottom-tab mobile layout** - one system, automatically adapted. No switching needed.

Tips

- Your account is identical to the phone app - **no new registration**. Forgot your password? Contact your admin.
- If you installed an older version before: just **close the open PMAApp window and reopen it** (or refresh once) - it will automatically update to the new version with the Cockpit.
- Network: normal internet access is enough (HTTPS is encrypted).
- If the install icon doesn't appear: make sure you're on a recent Chrome/Edge, and use the "Install" option in the menu.
